### MILITARY CONSTRUCTION, ARMY RESERVE FY 1999

#### SPECIAL PROGRAM CONSIDERATIONS

#### Pollution Abatement

The military construction projects proposed in this program will be designed to meet environmental standards. Military construction projects proposed primarily for abatement of existing pollution problems at installations have been reviewed to ensure that corrective design is accomplished in accordance with specific standards and criteria.

#### Energy Conservation

Military construction projects specifically for energy conservation at installations have been developed, reviewed, and selected with prioritization by energy savings per investment cost. Projects include improvements to existing facilities and utilities systems to upgrade design, eliminate waste, and install energy saving devices. Projects are designed for minimum energy consumption.

#### Flood Plain Management and Wetlands Protection

Proposed land acquisitions, disposals, and installation construction projects have been planned to allow the proper management of flood plains and the protection of wetlands by avoiding long and short term adverse degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Nos. 11988 and 11990.

#### Design for Accessibility of Physically Handicapped Personnel

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

#### Environmental Protection

In accordance with Section 102(2)(c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the Military Construction Program.

#### SPECIAL PROGRAM CONSIDERATIONS

(continued)

#### Economic Analysis

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources.

#### Reserve Potential

The Reserve potential to meet and maintain authorized strengths of all Reserve flying/nonflying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with all other Services having Reserve flying/nonflying units in these areas, that the number of units of the Reserve components of the Armed Forces presently located in those areas, and those which have been allocated to the areas for future activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorized strength considering the number of persons living in the areas who are qualified for membership in those Reserve units.

#### Preservation of Historical Sites and Structures

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object, or setting listed in the National Register of Historic Places, except as noted on DD Form 1391.

#### Use of Excess Schools and Other Buildings

Considerations were made to utilize available commercial or academic buildings but none were suitable except as identified by specific projects in this request.

#### Placement of Reserve Component Units in Local Communities

The Reserve manpower potential to meet and maintain authorized strengths of all Reserve units in the areas where units are to be located has been reviewed in accordance with the procedures described in DoD Directive 1225.7. It has been determined, in coordination with the other Military Departments having Reserve units in the area, that the number of Reserve components presently located in the area, and those units having been allocated to this area for future activation, is not and shall not be larger than the number that reasonably may be maintained at authorized strength.

#### SPECIAL PROGRAM CONSIDERATIONS

(continued)

#### Facility Planning and Design Guide

Unless otherwise noted, the projects comply with the scope and design criteria prescribed in Part II of Military Handbook 1190, "Facility Planning and Design Guide."

#### Congressionally Directed Projects

No projects were directed by any congressional committee for inclusion in the FY 1999 budget.

#### Congressional Reporting Requirements

#### Maintenance and Repair of Real Property

The following information is in response to the Senate Appropriations Committee requirement contained on page 24 (Non-MILCON Construction Activities) of the Report #100-200 and page 1006 (Non-MILCON Construction activities), Senate and House Conference Report #100-498.

#### 10. DESCRIPTION OF PROPOSED CONSTRUCTION

Add a new maintenance facility to an existing maintenance/storage facility. Permanent construction will be reinforced concrete foundations, concrete floor slabs, structural steel frames, masonry veneer exterior walls, insulated and pitched roof with metal ribbing, mechanical and electrical systems, and concrete slab entrance apron to the work bays. Foundations with radon barrier will be required. Supporting facilities include demolition/reconfiguration for connecting the new structure to the existing maintenance/storage facility, site improvements, and extension of utilities to serve the project. Air conditioning: 17.6 kW

#### 11. REQUIREMENT: 772 m2 Adequate: 221 m2 Substandard: 831 m2

PROJECT: Construct an Organizational Maintenance Shop as an addition to an existing Equipment Concentration Site (Add/Alt OMS/ECS). (New Mission). REQUIREMENT: This project will eliminate a shortage of 552 m2 authorized for Organizational Maintenance Shop (OMS) space to support USAR units stationed at the Duncan-Selix Armed Forces Reserve Center (AFRC), Fort Carson, CO. Construction will convert existing space, 221 m2, into three work bays with rollup doors, build two new work bays, tool and parts storage for OMS and Area Maintenance Support Activity (AMSA) operations, controlled waste storage, battery storage, unisex toilet, and office spaces. Project is required to allow hands on maintenance training, unit level maintenance, and required annual services on vehicles/equipment. Construction of tandem work bays to be adjacent to converted work bays. CURRENT SITUATION: The existing maintenance/storage facility has shortages in every category of authorized space. Recent activations and unit assignments to support 96th Regional Support Command (RSC) Force

4.	PROJECT TITLE	5.	PROJECT NUMBER
	Add/Alt OMS		CAR 99-10929

Projection Platform at Fort Carson have created serious space shortages. The lack of maintenance work bays limits the amount of scheduled maintenance and services accomplished by units to 50 percent of requirements. Two recently assigned units, both with a Force Support Package mission, have a total of 315 oversized vehicles/trailers (e.g., 5,000 gallon tankers and flat bed trailers) assigned that demand significant maintenance training requirements. No space is presently available to support the units' organizational maintenance requirements. Each outsized vehicle/trailer requires use of two work bays (drive thru alignment) when performing services. Also, there is currently no parts/tool storage space or office space to support the unit maintenance mission and operations.

IMPACT IF NOT PROVIDED: The units will not meet training and equipment readiness requirements, plus will not be able to perform routine, scheduled organizational maintenance. Hands on maintenance training will not be available to sustain MOS skills. Morale, recruiting and retention, and mobilization posture are also expected to be severely impacted.

#### 10. DESCRIPTION OF PROPOSED CONSTRUCTION

Acquire up to 26,961 square meters of land to support alteration and expansion of the existing Berry-Rosenblatt USAR Center (USARC) and Organizational Maintenance Shop (OMS), West Hartford, CT. This new expanded facility will house an authorized strength of 635 service members in eight Army Reserve units, and replace a leased facility at Danbury, CT. The annual lease in Danbury, CT, is \$100,000/year.

#### 11. REQUIREMENT: 26,961 m2 Adequate: 0 Substandard: 0

PROJECT: Acquire up to 26,961 m2 of land to support alteration/expansion of a USARC and an OMS, proposed to be constructed in FY 2002. (Current Mission) This project requires a waiver to the Department of Defense Major Land Acquisition Moratorium. A waiver was submitted in September 1997.

REQUIREMENT: This land is required to support an MCAR project currently programmed for construction in FY 2002.

CURRENT SITUATION: Units programmed for this project are currently located in a leased facility in Danbury, CT, and the Berry-Rosenblatt USAR facility which is 200% utilized. The USAR units involved are severely short of administrative, education and unit storage areas. The facility was designed and built on 26,961 m2 of land in 1954, and subsequently expanded in 1975. The current property is inadequate for the required expansion. Acquisition of 26,961 m2 of additional and adjacent property is required. The expansion project is required to properly accommodate and consolidate the training needs of the units stationed at two facilities and eliminate a \$100,000 annual lease.

#### 10. DESCRIPTION OF PROPOSED CONSTRUCTION

Cconversion of building 1410 at Devens Reserve Forces Training Area from its current use as a commissary to use as an Army Reserve Regional Support Command (RSC) headquarters. Renovation work includes new flooring, new ceiling and lighting, heating and air conditioning ducts, new electrical outlets and wiring. Supporting facilities include additional toilets, shower and locker rooms for both men and women. Air Conditioning: 329 KW

11. REQUIREMENT: 6,071 m2 Adequate: 325 m2 Substandard: 7,432 m2

PROJECT: This project will provide a total of 6,071 m2 of administrative, classroom, storage, and special purpose space to support the operations of the units assigned. (Current Mission)

REQUIREMENT: This project is necessary to provide adequate working space for the 94th RSC headquarters and Devens teams of the 416th ENCOM, which consists of 111 full-time personnel and 212 drilling reservists that provide command and control plus BASOPS support for more than 9000 USAR soldiers in the six state New England area. This project enables the USAR to move into a single five-year old building and move out of three 35-year old buildings, taking advantage of the associated savings in operating costs. The older buildings will be excessed. The renovated facility will include administrative offices, classrooms, storage areas, and supporting facilities. Storage areas will be constructed with new walls and caging to provide security of stored items. A locker room with showers and additional toilets will be constructed for both men and women. Building exterior work will consist of additional windows in exterior walls for increased natural light. Project requires removal of freezer, cold storage equipment, and other installed commissary equipment. The

The original design strength for this facility was 487. Force structure changes have temporarily reduced the currently stationed units to two. Another new unit, a Quartermaster Company, is programmed to backfill one that was previously inactivated. This will bring the authorized strength back up to 493. A waiver of assigned strength has been obtained from the Office of the Assistant Secretary of the Army for Installations, Logistics, and Environment so that design and construction may proceed.

IMPACT IF NOT PROVIDED: The units assigned to the existing USARC will continue to operate in grossly inadequate conditions. Essential training will continue to be deferred, delayed, or performed under substandard conditions. Lack of adequate training and operational facilities for the medical specialty skills will continue to have a significant negative impact on individual skills training and qualification.

strative functions to enhance unit readiness. Renovate building 208 to provide for the USARC training complex. The project will also include renovation and construction of parking areas and washracks, security

other overcrowded centers in the greater New York City area (Bronx, Brooklyn, and Queens). They will be restationed at the Fort Wadsworth USARC when construction is complete. Buildings are already grossly overcrowded and almost totally inadequate for unit training and operational requirements because of their condition and inappropriate configuration.

CURRENT SITUATION: The USAR acquired facilities at Naval Station New York from the Navy as part of the 1995 Base Realignment and Closure Act (BRAC). Eight USAR units currently occupy the facilities, and two more units are scheduled to activate in FY 1997. The remaining units are now located in

fencing and lighting, and other site improvements.

No other adequate facilities (including leased space) are economically or geographically available in the metropolitan New York City area to

accommodate these units. The poor condition of the existing buildings and the shortfalls in usable space have a major impact on training and readiness of the assigned units, which include Force Support Package (FSP) units (i.e., high priority, early deploying units). IMPACT IF NOT PROVIDED: Assigned units will continue to operate and train in grossly inadequate and substandard facilities, and units in other overcrowded facilities will not be able to relocate. Readiness, morale, recruiting, and retention will be adversely affected.

Purchase of an existing facility located at 765 Taylor Road, Gahanna, Ohio. The facility was constructed as a build-to-suit for the Army Reserve in 1989. The three buildings include the main training building, OMS shop, and storage. The main building includes administrative areas, classrooms, an arms vault, assembly room, medical lab, photo lab, kitchen and storage areas. The OMS shop includes office, tool, and repair rooms and two (2) drive-thru work bays. The main building is fully sprinklered. Construction of the main building has reinforced concrete slab, steel frame over ribbed metal siding and brick. Electrical is 1000 amp, 277/480 volt main panel, HVAC are all gas fired zoned package units. Utilities are served by Columbus water/sewer. Site is 10.1 acres which includes 2 acres for future use. Air conditioning: 270 KW.

11. REQUIREMENT: 8,161 m2 Adequate: 5,817 m2 Substandard: 0 m2

PROJECT: Purchase an existing facility that was a build-to-suit for the Army Reserve in 1989. The Army Reserve has been leasing this center since 1989 at a cost of \$800,000/year. (Current Mission)
IMPACT IF NOT PROVIDED: OCAR policy has been to reduce leases wherever possible. Purchase of this facility will save the Army Reserve \$800,000 annually in OMAR money.

Construct a new two-story training building, one-story organizational maintenance shop and unheated storage facility. Alter and upgrade existing facility for maintenance and storage in support of direct support-general support activities and equipment concentration site (ECS). Alter and upgrade existing training building. New permanent construction will concrete foundations and floor slabs, structural steel framing, masonry veneer walls, insulated standing seam metal roofing. Includes smoke, fire detection and sprinkler systems; an intrusion detection system for the arms storage area; parking; site improvements; fencing; wash rack with oil/water separator. Air conditioning: 703 KW

### 11. REOUIREMENT: 9,598 m2 Adequate: 0 m2 Substandard: 0 m2

PROJECT: Construct a new U.S. Army Reserve Center, Organizational Maintenance Shop, unheated storage facility. Alter, renovate, and upgrade maintenance facilities and training buildings. (Acquire 10 acres of land for construction, to be provided by state of Utah IAW PL 105-85). (Current Mission)

REQUIREMENT: Transfer of 10-acre parcel of Stephen A. Douglas Armed Forces Reserve Center (SADAFRC) to state of Utah in support of 2002 Salt Lake City Winter Olympic Games impacts units currently occupying the 10-acre parcel. Facility requirements for the affected units are dictated by mission and operational requirements. Alteration/upgrade of existing facilities required to support Presidential Initiative: 1) relocated functions/activities; 2) laboratory; 3) storage space for historical and real property accountability files; 4) installation operations and maintenance storage. New training building includes administrative areas,

classrooms, library, storage, assembly hall, learning center, arms vault, kitchen/dining areas. ECS warehouse is required to secure go-to-war stocks. OMS facility is required to provide hands-on training plus required annual maintenance services and checks. Existing maintenance facility must be upgraded and altered to support DS-GS operations and storage and ECS storage. DS-GS operation is a full-time operation that repairs vehicles, equipment, canvas, weapons and electronic/communications equipment for a six state area. DS-GS maintenance operations require a minimum of five workbays. MEP and POV parking for remaining activities/ units must be constructed and/or provided on remaining property. Telecommunications requirement includes pre-wired workstations, basic service, instruments, local area network (LAN) system, network lines, equipment and wiring for proper communication linkage. CURRENT SITUATION: 96th RSC units currently occupy a 10-acre site on SADAFRC scheduled for transfer (in support of the 2002 Salt Lake City Winter Olympic Games) from the Army Reserve to the state of Utah. This will require unit relocations to new facilities (in Salt Lake City) and renovation of existing facilities in Ogden, Utah, and on SADAFRC. IMPACT IF NOT PROVIDED: Loss of facilities without replacement eliminates area capability to support higher echelon logistics, training, repair, and maintenance.

PRIMARY FACILITIES: Training Building Maintenance Building Marine AMSA Unheated Storage SUPPORTING FACILITIES: Site Improvements, Utilities Pier/Bulkhead Construction Paving Fencing Telecommunications TOTAL CONSTRUCTION COST Contingencies (5.0%) Supervision and Administration (6.0%) TOTAL PROJECT COST	4631 1399 474 438 836 63	1042 1164 1614 614 1765 215	7488 (4826) (1628) (765) (269) 1779 (101) (1476) (135) (36) (31) 9267 463 584 10314

Construct a new one-story U.S. Army Reserve Center (USARC), Organizational Maintenance Shop (OMS), and Area Maintenance Support Activity (AMSA), pier extension with harbormaster and marine maintenance facilities, boat and bridge launching ramp, and two unheated storage buildings. Permanent construction will include concrete foundations and floor slabs, masonry and steel structures, and standing seam metal roofs. Supporting work includes construction of a pier and bulkheads, parking, lighting, washrack, and fencing. Air Conditioning: 264 kW.

11. REQUIREMENT: 6,942 m2 Adequate: 1223 m2 Substandard: 5719m2

PROJECT: Construct a new USAR Center, Organizational Maintenance Shop, and Area Maintenance Support Activity (USARC/OMS/AMSA) with marine facilities and maintenance capabilities. (Current Mission) REQUIREMENT: This project will provide essential and adequate space for two high priority, early deploying Force Support Package (FSP) units and three other units to conduct training, equipment maintenance, logistic support, and required administrative functions to enhance unit readiness. The facilities will include classrooms, library, learning center, multipurpose assembly area, arms vault, and unit and individual equipment storage areas. The new marine and ground maintenance facility will support mission essential training and maintenance on unit equipment and watercraft and will include work bays, space for tool and parts storage, flammable material storage, battery storage and servicing, and administrative areas. Facilities will provide secure parking for military equipment and waterfront facilities to support assault float bridge and transportation watercraft training by the two FSP units. CURRENT SITUATION: USAR units are currently occupying seven inadequate

and substandard buildings on two separate installations. Due to the lack of maintenance space, the assault float bridge company performs equipment maintenance in a tent reserved for combat use. The boat company has insufficient docking, berthing, and storage space, requiring equipment to be stored in several remote locations. The overall lack of training and classroom space, storage areas, maintenance facilities, and a consolidated operation causes all of the units to lose valuable training time and opportunities every weekend.

IMPACT IF NOT PROVIDED: All of the units, but especially the high priority FSP units, will continue to suffer from the lack of consolidated and adequate facilities to support mission essential training and marine operations and maintenance.

Construct an Aviation Support Facility (ASF), consisting of a maintenance hangar with basic and special shops, aircraft wash aprons, and hangar access apron. Permanent construction will include concrete foundations and floor slabs, structural steel frame, steel-clad building with metal roof. Supporting work includes construction of paved aircraft parking areas and aprons, washing facilities, installation of an overhead crane, and site utilities and improvements. Air Conditioning: 158 kW.

11. REQUIREMENT: 5,463 m2 Adequate: 0 m2 Substandard: 5002 m2

PROJECT: Construct an Aviation Support Facility (ASF) with supporting facilities. (New Mission)

REQUIREMENT: This project will provide an ASF that will be utilized by ASF 92 (a full-time staff of 41 personnel) and Company B, 159th Aviation Battalion (4 full-time personnel and 201 authorized reservists), to support mission-essential training, operations, and maintenance on CH-47D helicopters and other organic vehicles and equipment. The facility will include three maintenance bays, offices for supervisors, inspectors, and pilots, tool and parts storage areas, and operations space consisting of classrooms and pilot briefing area. The hangar will be fitted with fire suppression equipment and an overhead crane. Exterior improvements will include specially contained parking areas for fuel trucks, relocation of compass rose and fueling pads, as well as unheated and covered storage areas.

CURRENT SITUATION: The existing ASF and the USAR unit, a high-priority, early-deploying Force Support Package (FSP) unit, currently are allocated space at a joint Air Force and Navy training school at Fort Eustis. The USAR share of space is grossly inadequate to support training, operations,

maintenance, and storage. Aircraft wash facilities are non-existent, placing the aircraft at risk of corrosion in the salty air/environment of the lower Virginia Penninsula. No overhead crane is available, and hangar space is so limited that helicopters must be partially disassembled before placing them in the hangar for certain types of maintenance actions. These conditions contribute to losses of valuable training maintenance time and significantly increase total aircraft downtime.

IMPACT IF NOT PROVIDED: The ASF and the high priority, FSP aviation unit

impact if NOT PROVIDED: The ASF and the high priority, FSP aviation unit will continue to be seriously hampered by lack of adequate and properly configured facilities to support essential readiness training, operations, and maintenance. Unit readiness will be adversely affected.

Substandard: 640 m2

PROJECT: Construct a fire and crash rescue station. (Current Mission) REQUIREMENT: This project is required to provide a safe and adequate fire and crash rescue facility to accommodate safe operation of the airfield and the ability to respond to emergencies at the airfield and other adjacent areas of the installation.

CURRENT SITUATION: Crash rescue and fire response facilities are currently housed in a deteriorated, 38-year old concrete warehouse/hangar building, which is located only 23 meters from an active taxiway used by C-130 aircraft, thereby creating a safety hazard for military aircraft and passengers. The required safe zone is 79 meters. Air traffic averages 37 movements per day (1,100 per month), and is expected to increase with the pending relocation of a reserve unit, Company B, 228th Aviation Battalion, to Fort McCoy. Fire fighting vehicles are housed in an attached metal shed, which is heated and ventilated by the same mechanical system that serves the sleeping areas. The existing facility is in violation of Federal Aviation Administration (FAA) safety criteria. The last four Aviation Resource Management Surveys (ARMS) have found facility deficient in four areas: not suitable for habitation; airfield not visible; exposed insulation; overcrowded vehicle parking and equipment storage. The facility will continue to be a documented IMPACT IF NOT PROVIDED:

safety hazard to both the users of the airfield and the occupants of the facility. There will continue to be inadequate space for fire fighting vehicles and associated equipment.

Prepare engineering plans, designs, drawings, and specifications required to execute the USAR military construction program.

11. REQUIREMENT: This funding is required to provide design and engineering services for Military Construction, Army Reserve (MCAR), and Unspecified Minor projects, including value engineering, and continued development of design criteria and standard (conventional functional layouts). Funds will be used by the US Army Corps of Engineers (USACE) districts for in-house designs, Architect-Engineer (A-E) contracts, and administrative support functions. These funds are required for accomplishment of final correction, review, reproduction and advertisement of projects in the FY 99 program; for advancement to final design of projects in FY 00; for initiation of design of projects in FY 01; and for initiation of pre-concept design activities for projects in FY 02. The funds request for the annual planning and design requirement includes value engineering, the costs to update standards and criteria, guide specifications, and technical manuals.

\$1.368 million of this request is to specifically support the Fort Douglas, UT, projects.

POC: LTC David Robinson, 703-696-3992
